

REPLACEMENT PUMP UNITS FOR HAULMARK® DUMP TRAILERS

Replacement Pump Units for the Haulmark® Dump Trailers are in two basic sizes; they are rated by their output psi.

The pump units correspond to the different size of trailers to accommodate the size of the dump bed.

The pump units for the dump trailers are specific to the dump trailer. The pump's gear ratio pumps fluid faster than a slideout or leveling pump.

DUMP TRAILER MODEL	PUMP UNIT MODEL
80 x 12	2800/2200
72 x 10	
72 x 12	
80 x 14	3100/2200

NOTE: Be sure to check the model of the dump trailer to replace with the correct pump unit. Putting the 2800/2200 on the 80 x 14 dump trailer may cause the dump bed to fail and may result in component or property damage, serious personal injury or death.
