

# Aluminum Leveling Systems

Tougher. Lighter. More Efficient. Lippert Component's redesigned Hydraulic Leveling System is, simply put, the best in the business. Here's what separates us from the rest:

## Tougher

The primary change to the system is the new anodized aluminum alloy jack legs. Solid aluminum rods with Teflon impregnated hard coat finish helps the system eliminate pitting which tears the seals and leads to leaks.

Our pumps have an IP rating of 66 (67 being the highest). This means the pump can be totally submerged in water and still function.

All exterior connections use Deutsch connectors to ensure a weather proof connection.

## More Efficient

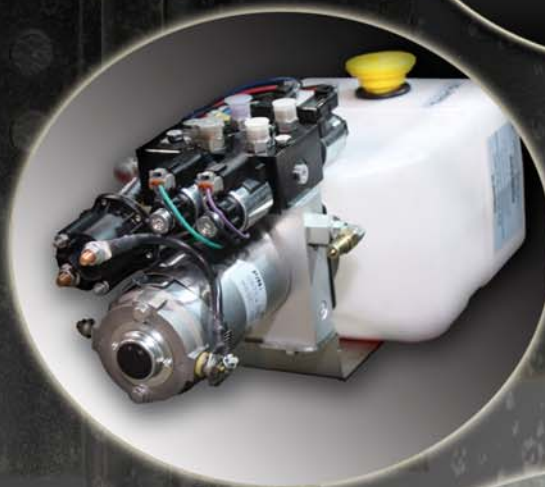

Our jacks have a patent pending retract tube extruded to the body of the cylinder eliminating the need for a lower attachment hose. All jacks come with a 9" or 12" swivel foot pad which is easily replaced if damaged.

The flow divider moves 0.8 gallons of fluid per minute with a 95% accuracy rating, compared to a 39% accuracy rating of our competitor's systems.

Our pump is 40% more efficient than off the shelf pumps used by other systems.

## Lighter

Because of the aluminum construction, this system weighs 70 pounds, TOTAL.
