

LIPPERT COMPONENTS, Inc.

Introducing... *PT*

The Evolution Of The Original Power Tongue Jack

It started with an idea...

The sculpted curves on the redesigned power tongue jack (*PT*) offer a more appealing look than its predecessor. With the revision of the exterior color to polar white the *PT* easily blends with current trends in today's market. Its new design helps eliminate bumping or snagging while maneuvering around to operate the jack.

Ease of operation and less hassle are just two of the details Lippert Components has taken in consideration with development in the new design. The elimination of an extra crank to operate the manual override makes it more convenient for the end user. The customer's current crank for their manual stabilizer jacks is the tool used to complete the task.

Also, the new design incorporates 4 LED lights to ensure you have the perfect amount of light to safely operate the jack. With 18" of travel the new power tongue jack is sure to adapt to all terrains and add to the enjoyment of the camping experience.

...And evolved into a DESIGN
